Section Review

- Vue component files have a **.vue** extension. Each file stores one component.

- We can attach a Vue configuration object to each component.

- The **name** property defines the component's name.

Section Review

- The **data** method returns an object whose properties are available to use in the HTML.

- Interpolate **data** properties using curly brace syntax

  {{ value }}

- We can customize Tailwind to add custom colors to our app. It will generate new utility classes for us.
