As a user, I'd like to be able to clear all my job filters so I can start a fresh search from scratch with minimal effort.

What do you want to do?   Clear filters

The $onAction Method

- The **$onAction** method on a Pinia store allows us to monitor actions within a component and perform side effects.

- Make sure to validate the action that you want to react to to stay efficient.

- Reacting to side effects may be a sign that your design can be improved.
